Center for Innovational Learning and Research,
7th Floor, 25 Michigan

Guest Speakers

David L. Eisler, D.M.A.
President of the University
Ferris State University’s College of Pharmacy Center for Innovational Learning and Research is a facility for instruction and inter-professional education. The facility will serve as a hub for students in the third and fourth years of the Pharmacy doctorate program, during which they prepare for and participate in the clinical portion of the curriculum.

With the opening of the Center, Ferris State puts its students in a contemporary health care setting rich with opportunities for learning and interdisciplinary collaboration. The University also becomes first in pharmacy instruction on the “Medical Mile,” reinforcing Ferris’ commitment to excellence in preparation of Michigan’s future health care professionals. More than one half of the state’s practicing pharmacists are Ferris State University graduates.

Featuring ample classroom and lab space as well as a series of smaller study rooms, the Center offers students 24-hour access to resources such as course materials and texts, all of which are digital. Occupying the 7th floor at 25 Michigan St., facility was designed by URS Corporation and furnished by Custer, both of Grand Rapids, with construction services provided by the Christman Company of Lansing.
