

B.S. Manufacturing Engineering Technology 4-Year Curriculum

A 4-year MET program will be introduced to the curriculum approval process in the near future. This curriculum is designed to permit students to enter into the program directly, as freshmen. Although it is not currently in place, a prospective student can still enter as freshman and exercise one of the several pathways that will be available to them to earn the B.S. Degree in MET.

- Transfer from appropriate Ferris State University A.A.S.
- Transfer from appropriate community college A.A.S.
- Transfer into program with 60 credits minimum with technical core
- Enter as a freshman and complete a customized academic track

When the 4-year program is implemented completely, the existing options will still be available to prospective students.
